EDUCATION

University of California, San Diego

B.S. Applied Mathematics and Computer Science

Expected Jun 2028

GPA: 4.00/4.00, Dean's List

- **Concentrations:** Software Systems, Computational Data Science
- **Related Coursework:** Data Structures & Algorithms, Computer Architecture, Machine Learning, Computer Systems & C Programming, Statistics & Applications

EXPERIENCE

Incoming AI/ML Software Engineering Intern

Booz Allen Hamilton

Incoming Summer 2026

San Diego, CA

- Developing agentic applications using LLMs, RAG, vector databases, and multi-step reasoning workflows.
- Prototyping and evaluating ML systems through experimentation, embeddings-based retrieval, model reliability analysis, and Python-based software development.

AI GTM Engineering Intern

Smart Sentry AI

Mar 2026 – Present

San Francisco, CA

- Selected to present at the 2026 Startup Grind Conference, delivering a pitch on AI security to 5,000+ attendees.
- Developed bespoke software with agents / AI workflows for sales and lead qualification with CRM integration.
- **Won SG 2026 Startup of the Year**; generated 200+ VC leads; qualified 10k+ leads through agentic software.

Undergraduate Student Researcher

UCSC Innovation Lab - Overture Maps Foundation

Mar 2026 – Present

Santa Cruz, CA

- Developed ML methods and data pipelines for geospatial entity resolution and spatial data linking in Overture.
- Supported LLM and computer vision frameworks for geospatial analysis and multimodal workflow development.

Autonomous Software Development Engineer

Formula Slug - Formula Student SAE

Aug 2025 – June 2026

Santa Cruz, CA

- Developed autonomous vehicle software for simulation, testing, and validation of self-driving system behavior.
- Built data pipelines, automated regression tests, and localization/path planning covering 50+ track scenarios.

Software Development Engineering Intern

Veb.AI

Mar 2025 – Jun 2025

UC Berkeley

- Engineered a RAG system using Python, FAISS, embeddings, and LLM APIs, implementing vector indexing, similarity search, reranking, to enable fast, accurate question answering across 5,000+ LinkedIn records.
- Built the application layer for low-latency query handling, retrieval orchestration, and response delivery.

PROJECTS / COMPETITIONS

Symphony

Founder

Jan 2026 – Present

Santa Cruz, CA

- Won **\$2k seed funding and 2nd Place overall** in the 2026 SC Launchpad Accelerator against 150+ teams.
- Formally pitched Symphony, an AI development analytics platform, to VC's, Investors, and C-Suite executives.
- Built a full-stack application with ticketing workflows, AI-agent visibility, and token analytics dashboards to track prompt volume, token usage, and efficiency with ML algorithms saving developers 30% on average in token costs.

Google Developer Student Competition - 2025 1st Place

Fullstack Development

Aug 2024 – Jun 2025

Santa Cruz, CA

- Developed and pitched SlugSpace, a swipe-based roommate matching app for UCSC using React Native (Expo), implementing a Tinder-style interface and survey-based compatibility scoring to improve housing matches.

SKILLS

Languages: Python, Java, C, JavaScript, TypeScript, SQL, R **Frameworks:** React, Node.js, Django, FastAPI
Data/ML: Pandas, NumPy, scikit-learn, PyTorch, Machine Learning, Deep Learning **Tools:** Git, Docker, SQLite, Supabase, Vercel, Render
